

Solution Requirements

Project: ComicCraft | AI/ML & Generative AI

Core Solution Requirements

The following requirements define the expected capabilities and qualities of the ComicCraft solution.

ID	Requirement	Type
SR-01	Accept a user's comic/story prompt.	Functional
SR-02	Send the prompt from frontend to FastAPI.	Functional
SR-03	Use Gemini AI for story generation.	Functional
SR-04	Return generated comic content to the frontend.	Functional
SR-05	Present a four-panel story structure.	Functional
SR-06	Provide clear error feedback for failed requests.	Functional
SR-07	Keep API credentials outside source code.	Security
SR-08	Maintain a simple and responsive UI.	Usability
SR-09	Keep frontend/backend interfaces consistent.	Reliability
SR-10	Support future image-generation integration.	Extensibility

Input

User provides a natural-language comic idea or story prompt.

Output

System returns an AI-generated comic story organized into four panels.

Acceptance Criteria

- Prompt can be submitted from the UI.
- Backend receives the expected request data.
- AI generation is invoked successfully when configuration is valid.
- Generated content is shown in the browser.
- Errors are communicated clearly.
