

Code-Layout, Readability and Reusability

Project: ComicCraft | AI/ML & Generative AI

1. Purpose

This document explains the coding organization of ComicCraft and the practices used to keep the project readable, maintainable and reusable.

2. Project Code Layout

```
ComicCraft_Corrected_Project/  
app/  
templates/  
static/  
run.py  
requirements.txt  
.env.example
```

3. Readability

- Use meaningful file, function and variable names.
- Keep functions focused on a single responsibility.
- Use consistent formatting and indentation.
- Keep frontend and backend request/response fields consistent.
- Add comments only where they clarify non-obvious logic.

4. Reusability

- Separate frontend presentation from backend API logic.
- Keep AI prompt construction in reusable backend logic.
- Use environment variables for configuration.
- Design response handling so image generation can be added later.
- Avoid repeated code across modules.

5. Maintainability Goal

The project structure is intended to make individual modules easier to update without rewriting the whole application.
