

Customer Journey Map

Project: ComicCraft | AI/ML & Generative AI

Purpose

The customer journey describes how a ComicCraft user moves from a creative idea to an AI-generated comic draft.

Stage	User Action	User Need / Pain Point	ComicCraft Response
1. Idea	Thinks of a comic idea.	May not know how to structure the idea.	Simple prompt box.
2. Prompt	Types the idea into the application.	Wants an easy, clear input experience.	Beginner-friendly web UI.
3. Generate	Submits the prompt.	Expects a useful response without manual story planning.	FastAPI sends the prompt to Gemini AI.
4. Review	Reads the generated story and panels.	Needs a coherent sequence and readable output.	Four-panel structured result.
5. Refine	Tries another idea or improves the prompt.	May need better characters, scenes or dialogue.	Prompt-based iteration; future controls.
6. Create	Uses the result as a comic draft.	Needs actual visuals for a finished comic.	Future image generation and export.

Key insight

The main user value is reducing the effort needed to turn an idea into a structured story. Visual panel generation and export are natural next-step extensions.
