

PROJECT DEMONSTRATION

Team Involvement in Demonstration

Project Title: ComicCraft - AI Comic Story Creator using Gemini Models

Prepared For: ComicCraft - AI Comic Story Creator using Gemini Models

1. Project Demonstration Overview

ComicCraft is an AI-powered comic story creation application designed to transform a user's creative idea into a structured comic story. The project uses Gemini models to assist with story generation, character development, dialogue creation, and comic-oriented content planning.

2. Team Involvement

Team Member Role	Demonstration Responsibility
Project Lead / Presenter	Introduces ComicCraft, explains the problem statement, objectives, workflow, and overall system architecture.
AI / Gemini Integration	Demonstrates the Gemini model integration, prompt flow, story generation, character and dialogue generation.
Application / UI Development	Demonstrates the user interface, input flow, generated story output, and comic creation experience.
Testing & Validation	Explains testing performed on prompts, generated outputs, usability, and handling of unexpected inputs.
Documentation & Support	Explains project documentation, technologies used, limitations, future enhancements, and support resources.

3. Demonstration Flow

Step 1 - Introduction: Present the project title, purpose, and the problem addressed by ComicCraft.

Step 2 - User Input: Demonstrate how a user provides a story idea, theme, genre, or character concept.

Step 3 - Gemini AI Processing: Show how the application sends structured prompts to Gemini models and processes the generated response.

Step 4 - Comic Story Output: Demonstrate the generated storyline, characters, scenes, and dialogue in a comic-friendly structure.

Step 5 - Result Explanation: Explain the AI-generated content and how the application helps users develop creative stories.

Step 6 - Conclusion: Summarize the project's capabilities, current limitations, and possible future improvements.

4. Key Features Demonstrated

- AI-assisted comic story generation using Gemini models.
- Creative prompt-based story development.
- Character and dialogue generation.
- Scene-by-scene comic story organization.
- Interactive user input and AI-generated output.
- Potential for future multimodal comic creation and richer visual storytelling.

5. Expected Demonstration Outcome

At the end of the demonstration, the audience should understand how ComicCraft combines a user-friendly application workflow with Gemini-powered generative AI to help users turn simple ideas into structured comic stories.

6. Conclusion

ComicCraft demonstrates the practical use of generative AI for creative storytelling. The team will jointly present the application, explain the Gemini integration, demonstrate the end-to-end workflow, and discuss the project's scope for future development.
