

Sample Project Documentation

Project: ComicCraft | AI/ML & Generative AI

1. Project Title

ComicCraft - AI-Powered Comic Story Generator

2. Project Description

ComicCraft is a Generative AI web application that converts a user's creative idea into a structured comic story and a four-panel text draft.

3. Problem Statement

Users may have creative ideas but find it difficult and time-consuming to convert those ideas into a coherent comic structure.

4. Proposed Solution

Use a FastAPI backend and Gemini AI to transform a user prompt into a structured comic story that can be reviewed and developed further.

5. Technology Stack

- Python
- FastAPI
- Gemini AI
- HTML/CSS/JavaScript
- Environment variables

6. Workflow

User Prompt → ComicCraft Web UI → FastAPI Backend → Gemini AI → Generated Story → Four-Panel Output

7. Current Outcome

The core text-generation workflow is implemented. The architecture is prepared for future visual panel generation and comic export.

8. Future Scope

- AI-generated panel images
- Character consistency
- Speech bubbles
- Multiple comic styles
- PDF/image export

9. Conclusion

ComicCraft demonstrates a practical use of Generative AI for creative storytelling and provides a base for a complete AI-assisted comic creation platform.
