

Define Problem Statements

ComicCraft – AI/ML & Generative AI Project

1. Problem Statement

Many users have creative story ideas but find it difficult to convert those ideas into a coherent comic. Creating a comic manually requires story planning, scene division, dialogue writing and visual planning.

2. Specific Problems

- Turning a short idea into a complete story takes time.
- Dividing a story into logical comic panels requires planning.
- Writing suitable dialogue and scene descriptions can be difficult for beginners.
- Users may not have illustration or comic-design skills.
- Existing manual workflows require multiple separate tools.

3. Proposed Solution

ComicCraft uses Generative AI to transform a user's prompt into a structured comic story and four-panel text output through a simple web interface.

4. Target Users

- Students and learners
- Creative writers
- Aspiring comic creators
- Content creators
- Users experimenting with Generative AI
