

Technology Stack

Project: ComicCraft | AI/ML & Generative AI

Technology Stack Used

ComicCraft uses a lightweight web stack with a Python backend and Generative AI integration.

Layer	Technology	Role in ComicCraft
Language	Python	Backend application development
Web Framework	FastAPI	API routing and web server
Generative AI	Gemini AI	Comic story/content generation
Frontend	HTML, CSS, JavaScript	User interface and API interaction
Configuration	Environment variables	Secure application settings/API credentials
Development	Visual Studio Code	Project development and debugging
Browser	Modern web browser	Run and test the ComicCraft UI

Why this stack?

- FastAPI provides a simple Python-based API layer.
- Gemini AI supplies the Generative AI capability.
- HTML/CSS/JavaScript keeps the frontend lightweight and easy to modify.
- Environment variables help separate secrets from source code.

Future Technology Extensions

- Image generation model/API for visual comic panels.
- PDF/image rendering for comic export.
- Persistent storage for saved characters and stories.
